Fast detection of communication patterns in distributed executions

Thomas Kunz, Michiel F. H. Seuren

November 1997 Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research

Publisher: IBM Press

Full text available: pdi(4.21 MB) Additional Information: full citation, abstract, references, index terms

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

Flexible control of downloaded executable content

Trent Jaeger, Atul Prakash, Jochen Liedtke, Nayeem Islam

May 1999 ACM Transactions on Information and System Security (TISSEC), Volume 2

Issue 2

Publisher: ACM Press

Full text available: pdf(297.79 KB)

Additional Information: full citation, abstract, references, citings, index terms, review

We present a security architecture that enables system and application a ccess control requirements to be enforced on applications composed from downloaded executable content. Downloaded executable content consists of messages downloaded from remote hosts that contain executables that run, upon receipt, on the downloading principal's machine. Unless restricted, this content can perform malicious actions, including accessing its downloading principal's private data and sending messages on th ...

Keywords: access control models, authentication, autorization machanisms, collaborative systems, role-based access control

Consistency management in Deno Peter J. Keleher, Ugur Cetintemel

December 2000 Mobile Networks and Applications, Volume 5 Issue 4

Publisher: Kluwer Academic Publishers

Full text available: pdf(151.24 KB) Additional Information: full citation, abstract, references, citings, index terms

We describe a new replicated‐ object protocol designed for use in mobile and weakly‐ connected environments. The protocol differs from previous protocols in combining epidemic information propagation with voting, and in using fixed per‐ object currencies for voting. The advantage of epidemic protocols is that data movement only requires pair‐ wise communication. Hence, there is no need for a majority quorum to be available and simultaneously connected at any single time. Th ...

4 An information system based on distributed objects

Michael Caplinger

December 1987 ACM SIGPLAN Notices, Conference proceedings on Object-oriented programming systems, languages and applications OOPSLA '87, Volume 22 Issue 12

Publisher: ACM Press

Full text available: pdf(1.33 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u>

The Telesophy system is intended to provide transparent access to all of a community's online information. The scale of the system requires that it be distributed across many machines via a network; the multiple types and formats of the information require that it be a multimedia system. We describe a prototype that uses objects to represent, query, display, and edit information. A two-level storage system is used to store the objects on multiple servers; queries are proces ...

5 A quality planning model for distributed multimedia in the virtual cockpit

Mark Claypool, John Riedl

February 1997 Proceedings of the fourth ACM international conference on Multimedia

Publisher: ACM Press

Full text available: pdf(1.32 MB)

Additional Information: full citation, references, index terms

Keywords: communications/networking/VOD applications

6 PLEIADES: an object management system for software engineering environments

Peri Tarr, Lori A. Clarke

December 1993 ACM SIGSOFT Software Engineering Notes, Proceedings of the 1st ACM SIGSOFT symposium on Foundations of software engineering SIGSOFT '93, Volume 18 Issue 5

Publisher: ACM Press

Full text available: pdf(1.62 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

Software engineering environments impose challenging requirements on the design and implementation of an object management system. Existing object management systems have been limited in both the kinds of functionality they have provided and in the models of support they define. This paper describes a system, called PLEIADES, which provides many of the object management capabilities required to support software engineering environments.

Designing and implementing asynchronous collaborative applications with Bayou
W. Keith Edwards, Elizabeth D. Mynatt, Karin Petersen, Mike J. Spreitzer, Douglas B. Terry,
Marvin M. Theimer

October 1997 Proceedings of the 10th annual ACM symposium on User interface software and technology

Publisher: ACM Press

Full text available: pdf(1.58 MB) Additional Information: full citation, references, citings, index terms

Keywords: Bayou, asynchronous interaction, computer-supported cooprative work, distributed systems

8 FAST: A large scale expert system for application and system software performance

A. E. Irgon, A. H. Dragoni, T. O. Huleatt

May 1988 ACM SIGMETRICS Performance Evaluation Review, Proceedings of the 1988 ACM SIGMETRICS conference on Measurement and modeling of computer systems SIGMETRICS '88, Volume 16 Issue 1

Publisher: ACM Press

Full text available: pdf(499.17 KB) Additional Information: full citation, references, citings, index terms

A framework for efficient reuse of binary code in Java

Pramod G. Joisha, Samuel P. Midkiff, Mauricio J. Serrano, Manish Gupta June 2001 Proceedings of the 15th international conference on Supercomputing

Publisher: ACM Press

Full text available: pdf(419.49 KB) Additional Information: full citation, abstract, references, index terms

This paper presents a compilation framework that enables efficient sharing of executable code across distinct Java Virtual Machine (JVM) instances. High-performance JVMs rely on run-time compilation, since static compilation cannot handle many dynamic features of Java. These JVMs suffer from large memory footprints and high startup costs, which are serious problems for embedded devices (such as hand held personal digital assistants and cellular phones) and scalable servers. A recently propose ...

10 Context-specific Bayesian clustering for gene expression data

Yoseph Barash, Nir Friedman

April 2001 Proceedings of the fifth annual international conference on Computational biology

Publisher: ACM Press

Full text available: pdf(233,32 KB)

Additional Information: full citation, abstract, references, citings, index terms

The recent growth in genomic data and measurement of genome-wide expression patterns allows to examine gene regulation by transcription factors using computational tools. In this work, we present a class of mathematical models that help in understanding the connections between transcription factors and functional classes of genes based on genetic and genomic data. These models represent the joint distribution of transcription factor binding sites and of expression levels of a gene in a single ...
